

CAM CEILING ABSORPTION MODULE

The CAM provides a comprehensive solution for reverberation control with its broad bandwidth and highly efficient sound absorption capabilities.

CAM CEILING ABSORPTION MODULE

This panel is an innovative hybrid product that combines broadband absorption between 100-4000Hz, ensuring a balanced NRC greater than 0.90.

Featuring a large cavity behind, the CAM extends its overall bandwidth by providing low-frequency absorption, addressing multiple room acoustic issues in a single product. It effectively reduces reverberation time in the space and minimizes early reflections between the ceiling and floor.

Choose from a range of industry-standard or custom fabrics to match your aesthetic preferences. The CAM is available in dimensions of 23-5/8" in width, 23-5/8" in length, and 10" in depth.

All components are Class A Fire Rated, ensuring safety and compliance.
